

StealthMounts®

Double Charger Mounts

PROUDLY MADE IN THE UNITED KINGDOM

FITTING INSTRUCTIONS & TIPS

1. Place the mounts loosely on the charger, one each side, making sure the fixing keyways are correctly orientated (small side up). Don't press in firmly yet.
2. Position the charger on the intended mounting surface and mark the desired position using the alignment notches in the top and bottom of the mounts.
3. Detach the mounts from the charger and accurately position them back on the surface, using the marks to align with the notches. Fix them to the surface with suitable fixings in both sets of keyways, ensuring the position remains accurate. Use the optional centre hole to lock the point in position and prevent lifting off using the keyway.
4. Place the charger against the mounts and once aligned, press firmly to secure.

To remove, use a flat blade and carefully lift at each corner. Not intended for multiple fittings/removal.
